

Real-time constraint solving (with OptaPlanner)

by Geoffrey De Smet
OptaPlanner lead

A different kind of decisions?

Processes CPU

Which processes
fill up this computer
as much as possible?

Optimal solution

How did we
find this solution?

First Fit by Decreasing Size

Processes CPU

Computer CPU

Not enough
room

Not enough
room

Optimal solution

First Fit Decreasing again...

Processes CPU

Not enough
room

Not enough
room

Not optimal!

FAIL

Optimal solution

This is... **NP Complete**

Processes CPU

Processes CPU

Computer CPU

Optimal solution

Can any algorithm
find the optimal solution
and scale out?

Optimal solution

Find optimal solution and scale out for an NP-complete problem?

\Leftrightarrow Is $P = NP$?

- Unresolved since 1971
- 1 000 000 \$ reward since 2000
 - One of the 7 Millennium Problems
(<http://www.claymath.org/millennium-problems>)
- Most believe $P \neq NP$
 - \Leftrightarrow **Impossible to find optimal solution and scale out**
- 3000+ known NP-complete problems (wikipedia
(http://en.wikipedia.org/wiki/List_of_NP-complete_problems))

Vehicle routing

Equipment scheduling

	November						
	1	2	3	4	5	6	7
Thing 1	B 1-2	E 2-4	C 4-7				
Thing 2	D 1-3	F 3-5			A 5-7		

NP-complete interconnection

Solve **one** use case
 \Leftrightarrow Solve **all** use cases
 \Leftrightarrow Prove $P = NP$

Use the right tool for the job.

- Insurance rate calculation: decision table
- License plate recognition: neural net
- Employee shift rostering: constraint solver

Don't use a hammer on a screw.

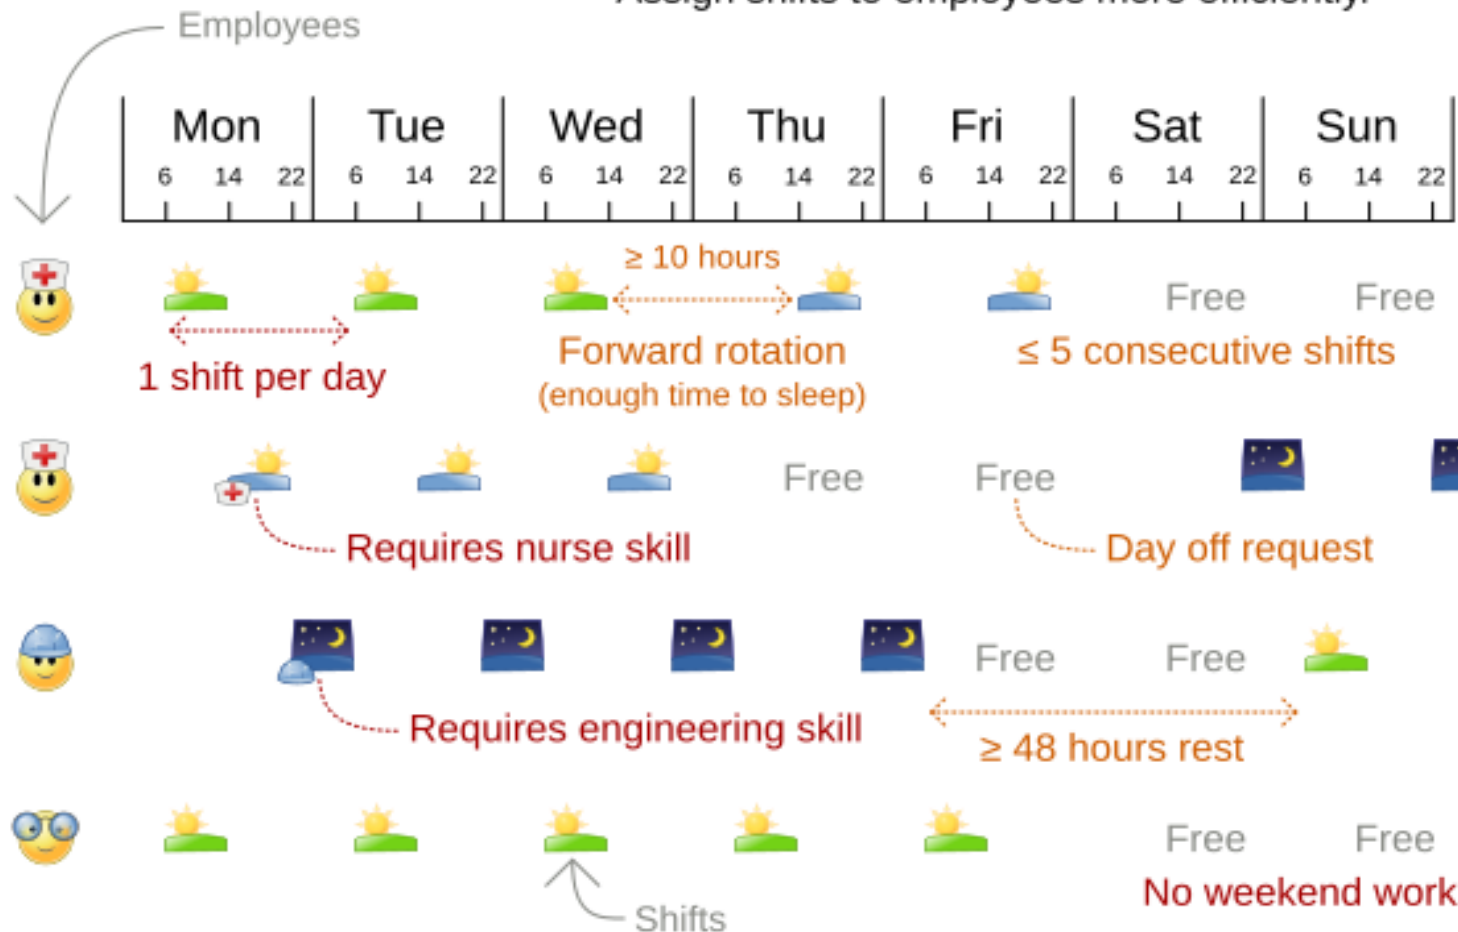

Constraint solver use cases...

- **Agenda scheduling:** doctor appointments, court hearings, maintenance jobs, TV advertisements, ...
- **Educational timetabling:** lectures, exams, conference presentations, ...
- **Task assignment:** affinity/skill matchmaking for tax audits, wage calc, ...
- **Employee shift rostering:** nurses, repairmen, help desk, firemen, ...
- **Vehicle routing:** route trucks, buses, trains, boats, airplanes, ...
- **Bin packing:** fill containers, trucks, ships, storage warehouses, cloud computers nodes, prisons, hospitals, ...
- **Job shop scheduling:** assembly lines for cars, furniture, books, ...
- **Cutting stock:** minimize waste while cutting paper, steel, carpet, ...
- **Sport scheduling:** football/baseball league, tennis court utilization, ...
- **Financial optimization:** investment portfolio balance, risk spreading, ...

Employee shift rostering

Employee rostering

Assign shifts to employees more efficiently.

What is constraint solving?

Implementation

1. Define domain
2. Define constraints
3. Solve

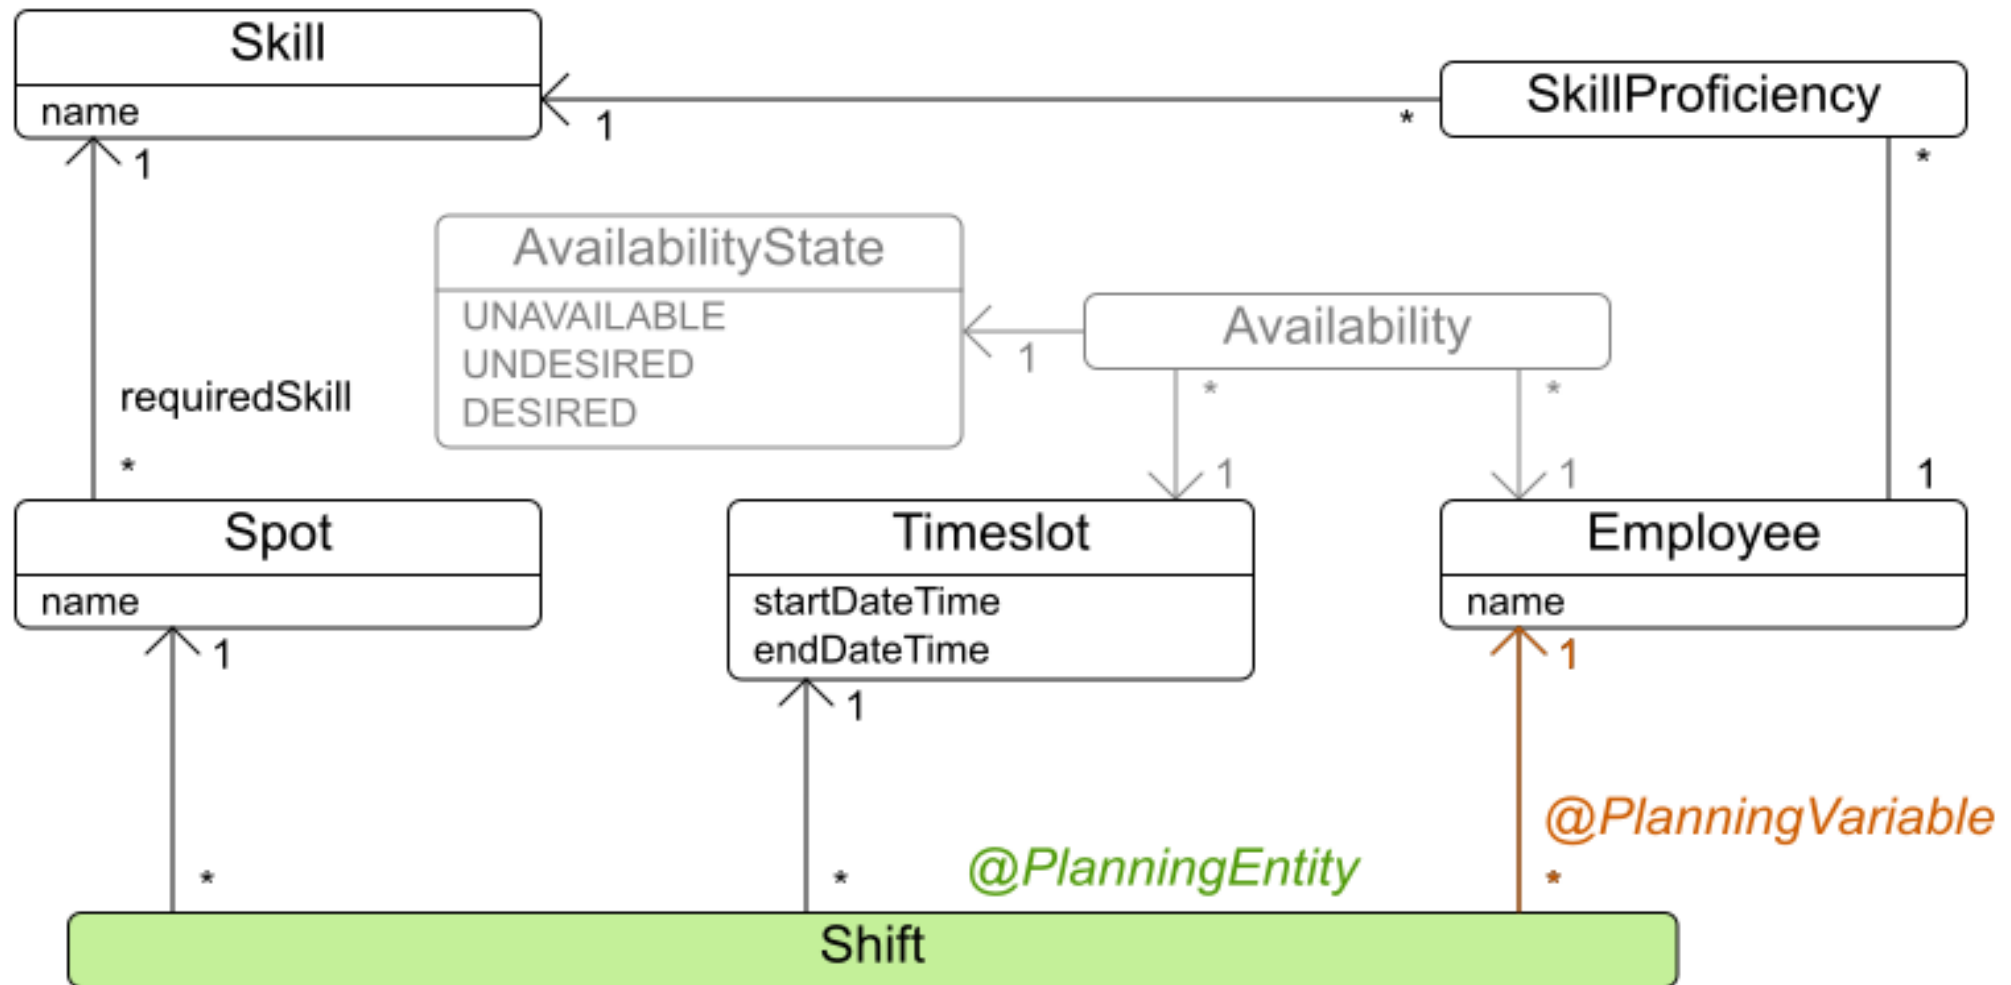

Input/Output overview employee rostering

Use 1 SolverFactory per application and 1 Solver per dataset.

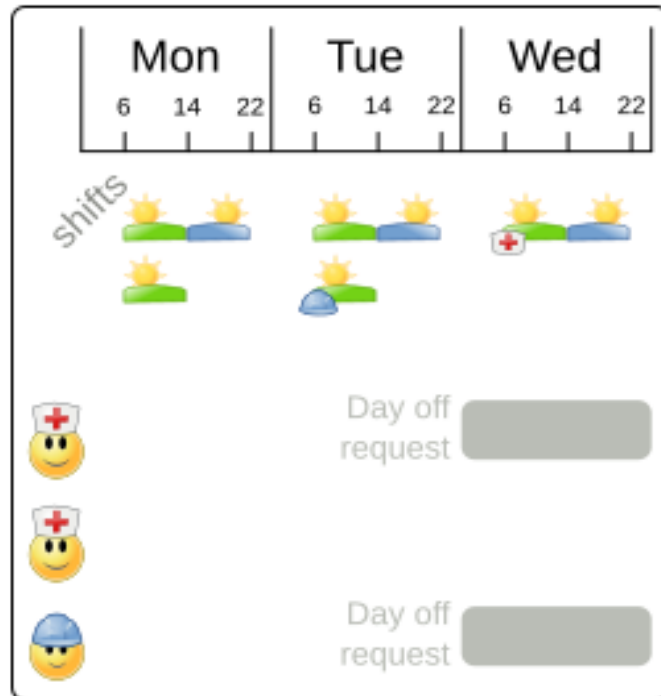

Define domain

Employee rostering class diagram

Score Comparison Employee Rostering

Hard constraints always outweigh soft constraints.

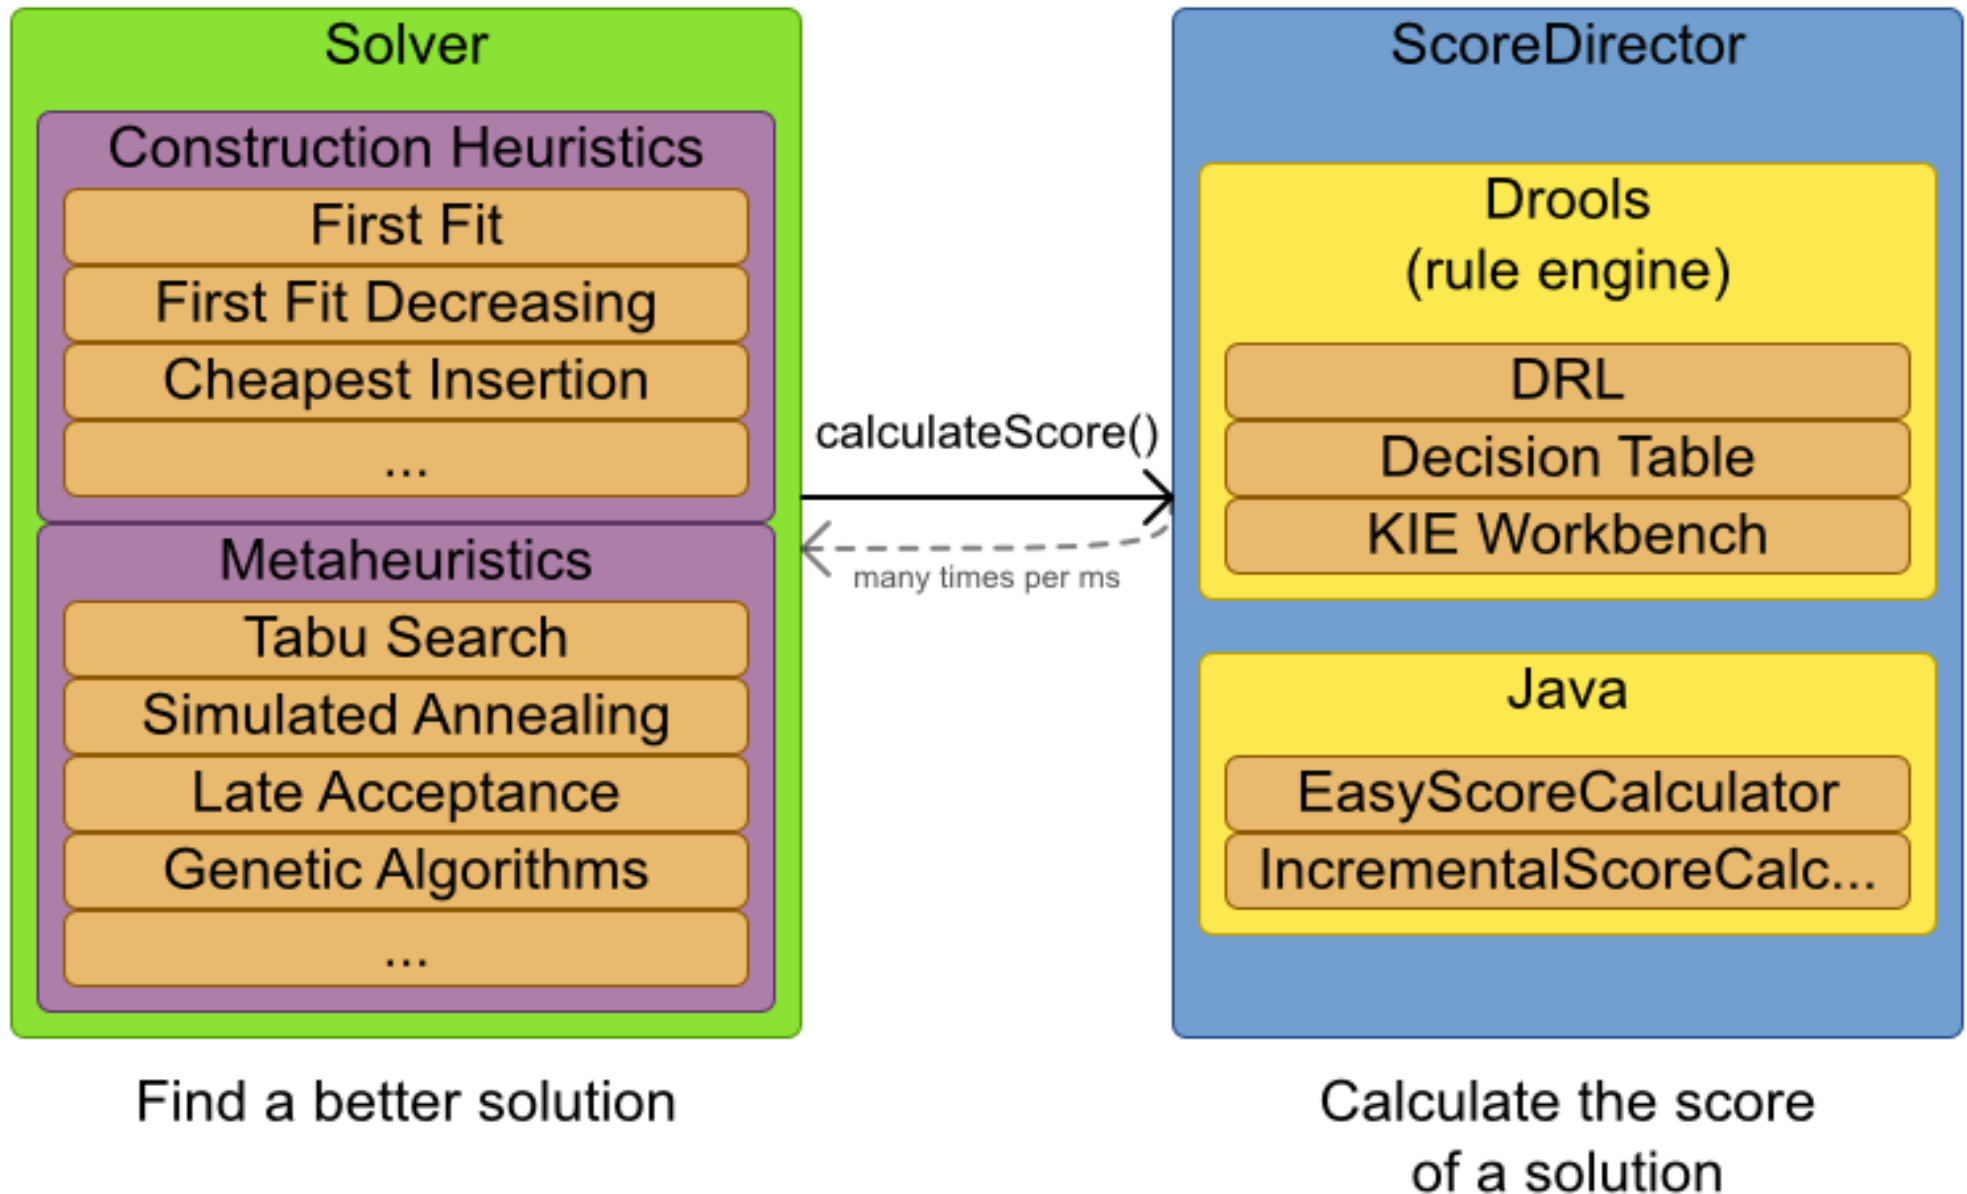

Score calculation

- Easy Java (slow)
- Incremental Java (painful)
- Drools DRL (also incremental)

Architecture overview

The Solver wades through the search space of solutions efficiently.
The ScoreDirector calculates the score of every solution under evaluation.

Required skill constraint (easy Java)

```
public class MyScoreCalculator
    implements EasyScoreCalculator<Roster> {

    public Score calculateScore(Roster roster) {
        int hardScore = 0;
        for (Shift shift : roster.getShiftList()) {
            Skill requiredSkill = shift.getSpot().getRequiredSkill();
            if (shift.getEmployee() != null
                // Employee lacks required skill
                && !shift.getEmployee().hasSkill(requiredSkill)) {
                // Lower hard score
                hardScore--;
            }
        }
        ...
        return HardSoftScore.valueOf(hardScore, softScore);
    }
}
```

Incremental score calculation

Calculating delta's is much faster than calculating the entire's solution's score.

Mon	Tue	Wed
6 14 22	6 14 22	6 14 22

Check every shift:

$0 + 0 + 0 + 0 - 1 - 1 + 0 + 0$

Required skill score: **-2hard**

Calculation from scratch (easy java)

Check every shift again:

$0 + 0 + 0 + 0 - 1 + 0 + 0 + 0$

Required skill score: **-1hard**

BigO for n shifts

Constraint	From scratch	Incremental
Required skill	$O(n)$	$O(1)$
At most 1 shift/day	$O(n^2)$	$O(n)$
...

Mon	Tue	Wed
6 14 22	6 14 22	6 14 22

Incremental calculation (inc. java, drools)

Check one shift (old & new)

$-2 + 1 - 0$

Required skill score: **-1hard**

Required skill constraint (Drools DRL)

```
rule "Required skill"
  when
    Shift(
      getEmployee() != null,
      // Employee lacks required skill
      !getEmployee().hasSkill(getSpot().getRequiredSkill()))
  then
    // Lower hard score
    scoreHolder.addHardConstraintMatch(kcontext, -1);
  end
```

Input/Output overview employee rostering

Use 1 SolverFactory per application and 1 Solver per dataset.

When do we solve?

- Publish schedule weeks in advance
 - Affects family/social lives
- Ad hoc changes
 - Sick employees
 - Shift changes

Continuous planning

Replan at the start of every period. Plan 3 periods, but only share the first period.

Mon	Tue	Wed	Thu	Fri	Sat	Sun	Mon	Tue	Wed	Thu	Fri	Sat	Sun	Mon	Tue
